

CLASSIC MODEL EVENT

A Day for Models from your Youth Build and fly a Classic Model

Models that were first released as plans or kits between **1950 and 1970**

Ever wanted to revisit that first radio model that got you into this daft hobby? Now you don't need an excuse!

Event scoring is still to be decided but it will be based on authenticity. So if your favourite model was single channel bang-bang controls with an old ED diesel for power and you build exactly that cover it in tissue & dope – **respect!** And maximum points.

If you convert it to four channels fully proportional with a 'massive' modern power plant – **shame!** And as they say in Eurovision "*nul points*"

Somewhere in between these two extremes hopefully we will have some interesting & nostalgic models. And don't forget it not about out & out wining – it's supposed to be fun!

BIY Models – model must have been built by the entrant at some time - **No ARTFs**

The provisional slot for this little event is some time in September next year – so no excuse there is plenty of time to build something. Winter project maybe?
